

ERP Digital Challenge

Manage Sales Orders (Neptune)

Common Issue :

The SAPGUI was less adaptive restricting users primarily to the desktop or laptop which didn't provide a lot of flexibility for its users.

Neptune / Fiori is set to replace the SAP GUI in the organizations that are migrating to S/4HANA. This is mostly the result of an overall better UX, developed to improve the new database. The older GUI is relatively lightweight and hard to use. As a result, from a modern mobile app, it has the sort of smooth gestures and controls you expect. In design, the displays are quick and clean, matching what consumers expect from today's apps.

Requirements

Personal Computer / Web Browser (Chrome) / Javascript IDE / Local WebIDE

(<https://blogs.sap.com/2020/07/17/sap-web-ide-personal-edition-setup-and-create-sapui5-application-for-beginner/>)

Deliverables

Send the solution developed (within allowed time) with a brief explanation on how to use by email to:

Suresh.kk@saint-gobain.com

Premkumar.haribabu@saint-gobain.com

Subodh.Gandhi@saint-gobain.com

Any questions ?
